Wall Safe
Electronic Lock Operating Instructions
-LG Combo Gard Lock-

Operating Instructions

- Enter combination *Lock will signal when proper combination has been entered*
- Turn Keypad
- Open safe door

***Repeated beeping during an opening indicates that the Battery is low and should be replaced**

*Invalid combination entry: Lock signals three times

*Wrong try penalty entry of three consecutive invalid combinations will initiate a 5 minute lock out period, during which time the LED flashes red at 10 second intervals

Changing Combination

(Lock signals twice after each valid entry)

Change combination with door open

- Enter six zeroes
- Enter existing combination
- Enter new six digit combination **TWICE**

****Invalid Combination Entry***

Lock signals three times and old combination is still valid

Changing Batteries

- Repeated beeping during an opening indicates that battery is low and needs immediate replacement.
- Remove battery cover from inside of safe door
- Replace battery with 9-volt Alkaline battery (Duracell only)

***If batteries are too low to open safe door:**

- Hold new battery up to contacts on front of lock
- While holding battery up to contacts, enter combination and turn keypad to open safe
